Designer who turns large, hard-to-compare product ranges into pages that help people decide, and builds them in production code. At Nitori Taiwan I design and ship feature pages end to end; three seasonal campaigns contributed **NT$3.31M in assisted revenue** across **635 orders**. Design Computing graduate of the University of Sydney, working comfortably in English and Chinese.

EXPERIENCE

Product & UI/UX Designer · Nitori Taiwan — 10/2025 – Present

Nine feature pages for nitori-net.tw, from UX and visual design to front-end code, within the brand's design guidelines.

- **Guided choice for large ranges.** Rebuilt static, product-first pages around how people decide: a sofa guide that narrows the range by room and household before comparing, and a kitchen cupboard guide where wall width rules out what won't fit.
- **Electric sofa guide.** Replaced one photo per model with a viewer that reclines each sofa and shows its size, plus a fabric-matched care-kit add-on priced against the sofa. First care-kit sale in its first month, after three years with none.
- **Story-led seasonal campaigns.** Mother's Day, Father's Day and Mid-Autumn: NT$3.31M assisted revenue and 635 orders in total (GA4). Father's Day, which added side-by-side specs to the story, reached NT$1.67M in 17 days, 40% above Mother's Day.
- **Data-driven front end.** Pages render SKU, colour and price data from one structure (Data Island method, jQuery), so product updates no longer need manual page edits.

English Instructor · Lih-Jen International School — 09/2024 – 07/2025

- Broke complex language concepts into simple, step-by-step formats that students could follow on their own.

Editor & Content Creator · Let's Talk in English (online learning platform) — 09/2023 – 12/2025

- Edited subtitles and comprehension exercises for beginner learners, keeping cognitive load low and content accessible; worked with producers, educators and curriculum designers.

SELECTED PROJECTS · UNIVERSITY OF SYDNEY

One Shop · AI-assisted fashion shopping app, sole designer and researcher — 13 weeks

- Questionnaire (20 participants), interviews and online ethnography traced returns to low purchase confidence; think-aloud tests and a heuristic review reshaped the fitting-room flow for clearer status and fewer dead ends.

Smart Station · interactive trolley return system, team of two — 02/2023 – 06/2023

- In-situ usability testing led to three changes: vouchers moved from the public screen to a private tablet, a jarring animation replaced, and a minigame bottleneck removed.

EDUCATION

Bachelor of Design Computing
University of Sydney · 09/2020 – 01/2024
Human-Computer Interaction, Design Thinking, User Research, Prototyping

Google UX Design Professional Certificate
Coursera
